## Evening Brief

Date: Sunday August 30<sup>th</sup>, 2020

### Weather Summary

#### \*\*\* Mixed Wet & Dry Thunderstorms in the Northern Half of the Great Basin \*\*\*

A cold front has just passed across the Great Basin, bringing a 5-10 degree cooldown to most areas, except for the far south. A stronger cold front will drop down from Idaho and across Utah Monday into early Tuesday, with more cooling. However, humidity levels ahead of this front Monday will still be about 12-17%, and much of the southern half of the region will have afternoon wind gusts approaching 30 mph. For this reason, High Risk has been issued this region for Monday afternoon (refer to 7-Day Matrix and Map for more details).

Behind this front on Monday there will be enough moisture for 0.15-0.25 inches of rain across eastern Idaho and Western Wyoming, with lighter amounts into northeastern Utah. Above 8000 feet there could be a light dusting of snow in these areas.

By midweek, strong high pressure will build across the western Great Basin, eventually spreading north and eastward, covering the entire region in hot and dry conditions for the latter part of the week into this upcoming weekend. Temperatures could approach record levels across parts of Nevada and southwest Idaho. However, no significant lightning or wind threats are expected during this time.

---

### Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 3	Light Initial Attack Activity
National	PL 5	New Fires and Acres: 18 fires for 45.3 acres. 4,707 Acres Large Fire Growth.

---

### Fuels/Fire Potential

#### \*\*\*A Fuel and Fire Behavior Advisory is in Effect for Eastern Nevada, Most of Utah and the Western Arizona Strip\*\*\*

Fuels are most critically dry across southern Idaho, into the northern half of Utah and eastern Nevada. Other areas, such as the mountains of Central Idaho and Western Wyoming, as well as western Nevada, have had recent precipitation and cooler conditions briefly take the edge off of their previously near record dry fuels.

Light to moderate precipitation amounts are expected to further moisten fuels across eastern Idaho and Western Wyoming Monday into early Tuesday. Afterwards, a significant, long term warming and drying trend will develop, and fuels will rapidly dry, initially across the western Great Basin, but as the

heat rapidly builds north and eastward, fuels will once again approach record dry levels by this coming weekend in many areas.

In the lower elevations, grasses are fully cured, and sagebrush live fuel moisture is ranging from 60-100% in most areas, correlating with extreme fire behavior.

## Resources:

### Aviation within the Great Basin

- 0 VLAT, 4 LATs, 0 Fire Boss
- 24 SEATs, 11 AA, 2 ASM
- 11 Type 1 Helicopters / 6 Comm.
- 14 Type 2 Helicopters / 5 Comm.
- 20 Type 3 Helicopters / 4 Comm.

### Crews Committed within the Great Basin

- 7 IHCs / 1 Available
- 10 Type 2IA / 1 Available
